Select Relevant Considerations

- Built world class online intelligence and operational risk management agency for a global operational risk management and business resiliency company. Developed market channels and secured numerous accounts within the commercial, government, and NGO spaces. Developed and managed mid- to large-size technology teams, including internal resources, onshore contractors, and offshore contractors. Architected and implemented global IT redundancy, backup, and disaster recovery/business resiliency programs.
- Architected, maintained, and grew diverse SDLC and deployment architectures. This included managing multiple SDLC's, staging, test, and UAT systems. Successfully performed over 1,500 application releases and delivery.
- Responsible for maintaining security practices and industry standards for all internal IT and B2C endeavors. These included implementation of industry-standards and GRC (NCUA, FDIC, FFIEC, GLBA, SOX, PCI, PII).
- Managed the transition of a large technology organization from a government contractor delivery model to a commercial, practice-based model. Developed practice models, implemented these practices, and assisted the business development and infrastructure groups in providing services and support for these practices. Spear-headed several successful project recovery efforts for government, pharmaceutical, and financial organizations.
- Developed robust technology intelligence program including technical due diligence for all acquisition and merger targets, analysis of existing technologies and competencies, determining how to leverage new technologies and competencies, and developing models that support the assimilation of new technologies and competencies.
- Author of eleven industry-focused patents, speaker at over 50 conferences, and authored over 100 professional papers. External representative for technology-based organizations, including direct interfaces of over 300 of the Fortune 500 companies.
